

FAQ

Cellular Nutrition Assays

Before you test:

Should supplements be discontinued prior to having the blood drawn for the Cellular Nutrition Assay?

There is no need to discontinue supplements weeks prior to testing. This micronutrient analysis is a reflection of the individual's long-term nutrient status (over ~ 6 months). If possible, do not take any medications/supplements at least 4 hours before blood draw.

Are these tests covered by health insurance?

No. Insurance plans do not reimburse for this test, currently.

Do I need to test through a healthcare practitioner, or may I test on my own?

You may test through a healthcare practitioner, directly through www.previmedica.com/, or one of our program advisors at PreviMedica. A blood draw provided by a medical professional is required. We can assist you with arranging a convenient option for you. You may also take part in our additional support programs.

After you test:

How long will it take to receive my test results?

Cellular Nutrition Assay test results are available online in 5-7 business days after the specimen is received in the laboratory. For tests ordered through a practitioner, results will be provided to the patient, by the practitioner.

How much support is available after testing?

With every test offered by Cell Science Systems, the patient and/or ordering practitioner may be eligible to receive a complimentary 30-minute phone or video consultation with a member of our support team to discuss test results.

To request an appointment for a complimentary session, please complete this form:
