

FAQ

Telomere Length

Before the test:

Does this test reveal biological age?

The Telomere Score does not equate to "biological age." Our Telomere test is measured via real-time PCR and the calculated result (arbitrary number) is "plotted" on our graph. The graphed ranges were determined based on our validation study of 206 test samples taking into consideration the age of each patient tested during the study and their respective Telomere result (arbitrary number).

Do I need to test through a healthcare practitioner, or may I test on my own?

You may test through a healthcare practitioner, directly through www.previmedica.com/, or one of our program advisors at PreviMedica. A blood draw provided by a medical professional is required. We can assist you with arranging a convenient option for you. You may also take part in our additional support programs.

Are these tests covered by health insurance?

No. Insurance plans do not reimburse for the Telomere Test, currently.

After the test:

How long will it take to receive my test results?

Telomere test results are available online within 5-7 business days after the specimen is received in the laboratory. For tests ordered through a practitioner, results will be provided to the patient, by the practitioner.

How much support is available after testing?

With every test offered by Cell Science Systems, the patient and/or ordering practitioner may be eligible to receive a complimentary 30- minute phone or video consultation with a member of our support team to discuss test results.

To request an appointment for a complimentary session, please complete this form:

<https://cellsciencesystems.com/resultsreview>

Appointments are also available for healthcare practitioners to discuss the technology and science pertaining to the test. To request an appointment, please complete this form:
